

CS spring cone crusher machine (Symons cone crusher):

Symons cone crusher machine brief introduction:

SBM Symons cone crusher machine (sales code, CS series cone crusher machine) is used widely at present, Compared to the traditional spring cone crusher, the structure of the Symons spring cone crusher with high-efficiency is more perfect, and its technical parameters are more advanced, and Symons cone crusher machine has excellent performance in the manufacture, installation, operation and maintenance. Symons cone crusher is the best choice for mining crusher with fine crushing, high productions and low maintenance.

NOTE: The type of crushing chamber depend on the size of feed and fineness of the crushed product. The standard type is applied to medium crushing, the medium type is applied to medium or fine crushing and the short head is applied to fine crushing.

Symons cone crusher machine is suitable for:

SBM Symons cone crusher machine has been designed to crush high or medium hardness raw materials, such as ore, copper ore, limestone, quartz, granite, nonferrous metal ore and rocks etc. Symons cone crusher machine is used in metallurgical industry, mining and construction, road building, chemical, silicate Industries, cement making industry etc.

Symons cone crusher machine features and cone crusher benefits:

- 1) Many types of crushing chamber.SBM Symons cone crusher with high-efficiency owns special design, customers can choose the crushing chamber according to the situation
- 2) Dry oil seal system.SBM Symons cone crusher has special seal structure, which extends the lubricants' replacement cycle and the life of spare parts.
- 3) Special material is adopted on the key components of SBM Symons cone crusher to support large crush power.
- 4) High productivity .Compared with other type of crusher machine, SBM Symons cone crusher has longer crush arm, larger stroke, higher crush power.
- 5) The crushing cone has long distance from bowl liner in every stroke, so the Symons cone crusher allows more materiel to get into the cavity and produces larger capacity
- 6) Low cost of daily run and maintenance.

Right manufacture materiel and excellent structure are chosen to prolong the service life;

The long crush arm reduces the load of slip bearing, gear, and shell;

The granularity of the product is uniform which reduces the cycle load;

The system of cleaning cavity with hydraulic pressure is convenient.

Symons cone crusher machine structure:

SBM Symons cone crusher machine mainly consists of frame, concaves assembly, mantle assembly, spring, bowl support, and transmission.

Auxiliary parts includes electrical system, lubrication system, and hydraulic cleaning system.
